

Application No.: 10/034,030

Docket No.: JCLA8482

AMENDMENTS**In The Claim:**

1. (currently amended) A method of fabricating a ceramic substrate~~[-with a thermal conductive plug of a multi-chip package]~~, wherein the method comprises:

providing a plurality of green tapes;

forming a plurality of conductive openings and thermal conductive openings passing through the green tapes;

after forming the conductive openings and the thermal conductive openings, filling a metal paste into the conductive openings and the thermal conductive openings;

after filling the metal paste into the conductive openings and the thermal conductive openings, stacking the green tapes together, wherein the metal paste inside the conductive openings of every green tape is in contact with its neighboring metal paste within the conductive openings of the green tapes, the metal paste inside the thermal conductive openings of each green tape is in contact with its neighboring metal paste inside the thermal conductive openings;

after stacking the green tapes together, cofiring those green tapes and the metal paste to form a pre-substrate, wherein the pre-substrate comprises an insulating structure, a plurality of thermal conductive plugs and conductive plugs, the insulating structure is formed by cofiring the green tapes so that a plurality of conductive plugs are formed by cofiring the metal paste in the conductive openings and a plurality of thermal conductive plugs are formed by cofiring the metal paste inside the thermal conductive openings, the pre-substrate further comprises a top surface

Application No.: 10/034,030

Docket No.: JCLA8482

and a bottom surface;

performing a planarization process after cofiring the green tapes and the metal paste;

forming a first metal film on the top surface of the pre-substrate;

forming a second metal film on the bottom surface of the pre-substrate;

patterning the first metal film to form a plurality of die pads and conductive traces, the die pads in contacted with the thermal conductive plugs and the conductive traces in contacted with the conductive plugs;

adhering a plurality of chips on the die pads; and

electrically connecting the chips to the conductive traces.

2. (previously presented) The method of claim 1, wherein a machine punching method is utilized to form the conductive openings and the thermal conductive openings passing through the green tapes.

3. (original) The method of claim 1, wherein a stencil printing method is utilized to fill the metal paste into the conductive openings and the thermal conductive openings.

4. (original) The method of claim 1, wherein a method of forming the first metal film comprises a sputtering deposition or an evaporation method.

5. (original) The method of claim 1, wherein a method of forming the second metal film comprises a sputtering deposition or an evaporation method.

Application No.: 10/034,030

Docket No.: JCLA8482

Claim 6. (Canceled)

7. (currently amended) The method of claim ~~[[6]]~~1, wherein the ~~[planarizing]~~ planarization process is carried out to planarize the top surface of the pre-substrate by a polishing method.

8. (currently amended) The method of claim ~~[6]~~1, wherein the ~~[planarizing]~~ planarization process is carried out to planarize the bottom surface of the pre-substrate by a polishing method.

9. (currently amended) The method of claim ~~[6]~~1, wherein a flat insulating layer is formed on the top surface of the pre-substrate during the ~~[planarizing]~~ planarization process, and a plurality of openings are formed through the insulating layer to expose the conductive plugs and the thermal conductive plugs.

10. (currently amended) The method of claim ~~[6]~~1, wherein a flat insulating layer is formed on the bottom surface of the pre-substrate during the ~~[planarizing]~~ planarization process, and a plurality of openings are formed through the insulating layer to expose the conductive plugs and the thermal conductive plugs.

Claim 11. (canceled)

12. (previously presented) The method of claim 1, wherein photolithographic and etching techniques are used to pattern the first metal film.

Application No.: 10/034,030

Docket No.: JCLA8482

13. (previously presented) The method of claim 1, wherein the pre-substrate further comprises a plurality of aligning-mark holes, which are formed like cavity-shaped holes and are used to align a mask layer to the pre-substrate.

14. (previously presented) The method of claim 13, wherein a fabricating method of the aligning-mark holes, comprising

forming a plurality of aligning holes passing through at least one of the green tapes while forming the conductive openings and the thermal conductive openings passing through on the green tapes;

stacking together with the green tapes with the aligning holes, going with the aligning holes aligned with each other, and stacking together with the green tapes without the aligning holes while stacking the green tapes together; and

forming the aligning-mark holes from the aligning holes after cofiring the green tapes and the metal paste.

Claims 15-25 (canceled)

26. (currently amended) A method of fabricating a ceramic substrate~~[-with a thermal conductive plug]~~, comprising:

providing a plurality of green tapes;

forming a plurality of thermal conductive openings passing through the green tapes;

after forming the thermal conductive openings, filling a metal paste into the thermal

Application No.: 10/034,030

Docket No.: JCLA8482

conductive openings;

after filling a metal paste into the thermal conductive openings, stacking the green tapes together, wherein the metal paste inside the thermal conductive openings of the green tapes is in contact with its neighboring metal paste inside the thermal conductive openings;

after stacking the green tapes together, cofiring those green tapes and the metal paste to form a pre-substrate, wherein the pre-substrate comprises an insulating structure, at least a thermal conductive plug, the insulating structure is formed by cofiring the green tapes and the thermal conductive plug is formed by cofiring the metal paste inside the thermal conductive openings;

performing a planarization process after cofiring the green tapes and the metal paste;

forming a metal film on the pre-substrate; and

patterning the first metal film to form at least a die pad, and the die pad is in contact with the thermal conductive plug.

27. (previously presented) The method of claim 26, wherein a machine punching method is utilized to form the thermal conductive openings passing through green tapes.

28. (previously presented) The method of claim 26, wherein a stencil printing method is utilized to fill the metal paste into the thermal conductive openings.

29. (original) The method of claim 26, wherein a method of forming the metal film on the pre-substrate comprises a sputtering deposition or an evaporation method.

Application No.: 10/034,030

Docket No.: JCLA8482

Claim 30. (canceled)

31. (currently amended) The method of claim [30]26, wherein the [~~planarizing~~] planarization process is carried out to planarize the pre-substrate by a polishing method.

32. (currently amended) The method of claim [30]26, wherein a flat insulating layer is formed on the pre-substrate during the [~~planarizing~~] planarization process, and at least an opening is formed through the insulating layer to expose the thermal conductive plug.

Claim 33. (canceled)

34. (previously presented) The method of claim 26, wherein photolithographic and etching techniques are used to pattern the first metal film.

35. (previously presented) The method of claim 26, wherein pre-substrate further comprises a plurality of aligning-mark holes, which are formed like cavity-shaped holes and are used to align a mask layer to the pre-substrate.

36. (previously presented) The method of claim 35, wherein a fabricating method of the aligning-mark hole, comprising

forming a plurality of aligning holes passing through on at least one of the a green tapes while forming the thermal conductive openings passing through the green tapes;

stacking together with the green tapes with the aligning holes, going with the aligning holes aligned with each other, and stacking together with the green tapes without the aligning

Application No.: 10/034,030

Docket No.: JCLA8482

holes while stacking the green tapes together; and

forming the aligning-mark holes from the aligning holes after cofiring the green tapes and the metal paste.

Claims 37-49 (canceled)
